

- PROFILE** I research democratic accountability and the politics of development, with a focus on South Asia. One line of my research looks at the political impact of the digital welfare state. A second strand seeks to explain why decentralization often fails to deliver expected improvements in public goods provision, local state capacity, and political responsiveness. A third line of work focuses on why citizens don't hold elected officials accountable for bad outcomes like air pollution and inadequate response to public health crises. I employ a mixed-methods approach to study these issues, using experiments, observational analyses, and extensive fieldwork. My research draws on first-hand experience of the world of politics. Prior to the PhD, I worked for a year and a half fielding and analyzing surveys for India's Congress party in its election war-room. Apart from research, I have taught a wide range of graduate-level quantitative methods courses and undergraduate-level comparative politics courses. In 2020, I received a university-wide award for excellence in teaching.

#### FIELDWORK

India: Guntur, Belgaum, Calcutta, Kheda, Madurai, Lucknow, Delhi (18 Weeks, 65 Interviews, Multiple visits between June 2017 and February 2020)

I studied how voters form political preferences and parties mobilize support. I focused on the role of brokers, ethnicity, material benefits, and government programs in elections. I also studied party organizations and functioning. I am creating a qualitative time series, comparing my interviews and field notes with those of Myron Weiner and Atul Kohli. Weiner conducted fieldwork in Guntur, Belgaum, Calcutta, Kheda, and Madurai in the 1960s, Kohli revisited them in the late 1980s.

India: Lucknow and New Delhi (August-September 2012)

I identified the caste of candidates from four major parties in three state elections.
